Section A: Townscape Appraisal Map Summary

A.1 Preparation

The Townscape Appraisal Map (Map 7) illustrates the key townscape elements that influence the architectural and historic interest and the character and appearance of places within the Study Area. It also sets the historic townscape in context with its wider urban and rural setting.

The townscape elements were assessed in terms of their contribution (broadly positive to negative) and recorded on one of three survey map layers (buildings, features, and tree cover/greenspace). Map 7 is a combination of the three surveys and, in conjunction with historic research, indicates the places that hold “special architectural or historic interest”.¹

The townscape survey map layers and the Townscape Appraisal Map were prepared using the MapInfo Pro desktop geographic information system (GIS) and overlaid onto the Ordnance Survey MasterMap series.

Against each entry in the surveys map layers is a set of metadata including a description of the element, its merits, and the survey date. This data is readily accessible from the digital GIS Townscape Appraisal Map. Printed schedules of the data are set out below. The printed data can be visually cross-referenced with the point, line and polygon annotations on the paper Townscape Appraisal Map (Map 7).

The format for the surveys maps and the wide extent of the Study Area allow for periodic review through updates rather than starting anew.

A.2 Survey Limitation

The scope and detail of the townscape element surveys was constrained by the visibility of the various elements from the public highway or other accessible land. Desktop sources have been used where helpful. Failure to mention a particular element or detail must not be taken to imply that it is of no significance. This will only be the case when specifically recorded.

The research, fieldwork and personal communications for the townscape element surveys were completed in two phases, between 2006 and 2007 and 2018 to 2022, with the later work including an update of the earlier fieldwork. The extended timeframe has demonstrated the fast pace of change for some places and element types in response to changing development pressures, local environmental factors, and dwellinghouse and garden fashion.

With regards to “listed buildings” or “notable principle buildings”, the map annotations and schedule entries only relate to the principal building and not to curtilage buildings and structures, which would also be part of a listing in line with section 1(5) of the Listed Building Act.² The level of detail and the protocols for the appraisal do not allow for determining the extent and status of curtilage buildings and structures.

¹ Section 69 of the Planning (Listed Building and Conservation Areas) Act 1990. Conservation Areas are defined as “*areas of special architectural or historic interest the character or appearance of which it is desirable to preserve or enhance*”.

² Under section 1(5) of the Planning (Listed Buildings and Conservation Areas) Act 1990 a listed building includes any object or structure fixed to the building and any object or structure within the curtilage of the building which, although not fixed to the building, forms part of the land and has done so since before 1st July 1948.

A.3 Description of the Townscape Survey Elements

Listed Buildings: Buildings and structures considered to be of “special architectural or historic interest” in the national context are included in the statutory National Heritage List for England (NHLE), which is maintained by Historic England on behalf of the portfolio Secretary of State.³ No work can be carried out to a listed building, internally or externally, that would affect its special interest without the prior approval of a listed building consent application. The listing includes any object attached to the building and any building or structure in its curtilage that pre-dates July 1948.

The Townscape Appraisal Map annotation is limited to the principal listed buildings and structures, and excludes curtilage buildings or structures. These are likely to be annotated as either a “positive building”, “positive wall”, “positive railings”, “positive gate pier”, “positive feature”, etc. with a note in the description indicating the likelihood of it being treated as part of a listed building.

The NHLE or the Somerset HER should be referred to for an up-to-date record of the listed buildings. The NHLE is available at <https://historicengland.org.uk/listing/the-list/> and the Somerset HER at <https://www.somersetheritage.org.uk>.

Notable Positive Buildings: These are buildings or structures of architectural or historic interest that are not considered to be of national importance to merit statutory listing, but which are important in terms of their architectural interest, historic interest or social value in the local context. They are drawn from the pool of “positive buildings”.

Notable positive buildings are important to the overall character and distinctiveness of the region and warrant nomination for inclusion in the Local Heritage List for Somerset and Exmoor.⁴ Further information on local heritage listing is available at <https://swheritage.org.uk/local-heritage-list>, and an up-to-date record of local heritage assets (both nominated and ratified) is recorded on the Somerset HER, available at <https://www.somersetheritage.org.uk>.

Positive Buildings: A broad category for all unlisted buildings and structures that hold architectural merit, historic interest, or make a positive contribution to the character or appearance of their surroundings.

All positive buildings holding historic interest are considered to be non-designated heritage assets (NDHAs), in accordance with the Government’s Planning Practice Guide.⁵ The description for each entry will indicate if it holds heritage interest.

Positive Buildings (Unseen): Buildings and structures that are likely to meet the criteria for a “positive building” from historic maps or other desktop evidence, but which are out of sight or not visited for verification.

Modest Buildings: Buildings of good universal design but of limited historic significance or design prowess.

Neutral Buildings: Buildings and structures that have little individual consequence on the character of an area. They are typically modest modern buildings that are well

³ The National Heritage List for England is the official and up-to-date database of all nationally protected buildings and sites in England, with the exception of conservation areas and World Heritage Sites.

⁴ The exception for nomination to the Local Heritage List for Somerset & Exmoor would be for those buildings that are potentially part of a designated heritage assets, such as being curtilage listed.

⁵ DLUHC (2021). Paragraph: 039 Reference ID: 18a-039-20190723.

embedded in their surroundings, or earlier buildings of former good design but with limited historic significance and degraded by unfortunate alternation.

Neutral Buildings (Unseen): Buildings and structures that are likely to meet the criteria for a “neutral building” from maps or other desktop evidence, but which are out of sight or not visited for verification.

Out-of-Place Buildings: This category caters for those buildings, invariably modern, that are in the wrong place. The appraisal has to consider both architectural quality and town planning issues, therefore, context is important. A house of good or reasonable individual appearance could have a negative impact on its surroundings, damage an established town plan, or spoil the setting of adjacent historic assets. A reasonable test is whether you would expect a building of this type to be granted planning permission in its location today.

Negative Buildings: This is a difficult category for the appraisal as it is particularly subjective and will change over time. The latter point being relevant to mid-to-late 20th century buildings, where insufficient time has passed, or local research completed, to judge the quality and legacy of these buildings.

In general, this category is reserved for those buildings and structures of limited or no historic significance and which are of bland design, align materials, or are severely degraded by poor maintenance. In short, uninteresting eyesores.

Listed Walls, Railings and Other Features: Walls, railings, gateways, piers, boundary markers, street furniture, paving, etc. considered to be of “special architectural or historic interest” in the national context, and included in its own right in the statutory National Heritage List for England (NHLE).⁶ No works can be carried out to a listed building or structure that would affect its special interest without the prior approval of a listed building consent application.

The NHLE or the Somerset HER should be referred to for an up-to-date record. The NHLE is available at <https://historicengland.org.uk/listing/the-list/> and the Somerset HER at <https://www.somersetheritage.org.uk>.

Notable Positive Railings, Fencing and Other Features: Walls, railings, gateways, piers, fencing, boundary markers, street furniture, paving, etc. that are not considered to be of national importance to merit listing but which are important in terms of their architectural interest, historic interest or social value in the local context. They are drawn from the pool of “positive features”.

These features are important to the overall character and distinctiveness of the region and warrant nomination for inclusion in the Local Heritage List for Somerset and Exmoor if they are not part of a designated heritage asset. Further information on local heritage listing is available at <https://swheritage.org.uk/local-heritage-list>, and an up-to-date record of local heritage assets (both nominated and ratified) is recorded on the Somerset HER, available at <https://www.somersetheritage.org.uk>.

Positive Walls, Railings, Fencing and Other Features: All unlisted walls, railings, gates and gate piers, fencing, boundary markers, street furniture, paving, etc. that hold architectural merit, historic interest, or make a positive contribution to the character or appearance of their surroundings.

⁶ The National Heritage List for England is the official and up-to-date database of all nationally protected buildings and sites in England, with the exception of conservation areas and World Heritage Sites.

All features with historic interest would be considered to be NDHAs in accordance with the Government's Planning Practice Guide.⁷ The description for each entry will indicate if it holds heritage interest.

Neutral Walls, Railings, Fence or Features: All unlisted walls, railings, fencing, gates and gate piers, etc. that have little individual consequence on the character of an area. They are typically modern estate brick walls and garden screen fencing.

Negative Walls, Railings, Fence or Features: Those features of limited or no historic significance and which are intrusive due to their inappropriate siting, design, materials, or degradation from poor maintenance.

Important Views: Views into or out of the Study Area that make a significant contribution to the character of a place.

Landmark Buildings and Features: Prominent buildings and trees with landmark qualities due to their striking visual presence, or strong community or historical association.

TPO Trees: Trees, or group of trees subject to a Tree Preservation Order (TPO). These are identified by the local planning authority in order to protect them from felling, inappropriate maintenance or wilful damage in the interest of protecting their contribution to the amenity of a place.⁸ However, their identification is often sporadic, reactive to events and not the outcome of systematic area surveys.

Prominent Trees: Non-TPO trees, or groups of trees, that are particularly notable in the street scene due to their stature, visual impact or historic interest, rather than for their horticultural merit (i.e. their amenity and historic values). This could include being an eye-catcher, a prominent avenue, surviving Victorian street trees or pleasure ground planting, or a ceremonial tree.

Trees or Groups of Trees: Individual trees and groups of trees are predominantly advantageous and a strong element in the character and appearance of a place. They are included on the Townscape Appraisal Map with the presumption of being positive features. There are occasions of trees being in the wrong place; of being of an inappropriate species or causing structural damage. These incidents would be identified in the accompanying description notes.

The tree cover was either recorded from fieldwork surveys or from the 2001 aerial photographic survey. The latter being used for clumps of trees in out-of-sight rear gardens. The survey method is recorded in the MapInfo metadata and schedules.

Lost TPO, Conservation Area or Other Trees: A record of trees known to have been felled or lost within the Study Area and their classification to indicate their status.

Hedging and Shrubbery: Areas of hedging and shrub planting are indicated on the Townscape Appraisal Maps where they have an impact on the character and appearance of the area.

Greenery: The greenery shown on the Townscape Appraisal Maps is derived from the OS MasterMap base map with minor amendments, where required, from fieldwork observation.

⁷ DLUHC (2021). Paragraph: 039 Reference ID: 18a-039-20190723. The plan-making bodies are the local planning authorities of England, including district councils, unitary councils, and national park authorities.

A.4 MapInfo Pro Table Structures and Annotation

The MapInfo Pro GIS is at the heart of the recording, integration and presentation of the Study Area data. The following information covers the essential GIS table structures and map annotations to allow for future updates associated with periodic conservation area reviews.

The MapInfo table files are held by the South West Heritage Trust and stored on its Historic Environment Service T: drive at T:\Data\GISdata.

The GIS attributes are contained in the following tables:
